

Spray-N-Fresh should not be confused with or compared to similar products on the market. While other products work on an absorption based principal (thru charcoal filtration and perfumes), Spray-N-Fresh is continuously circulated throughout the household environment reducing biological contaminants and producing a lasting protection.

“Indoor air pollution is one of the five most urgent environmental risks to public health.”

~ The Environmental Protection Agency

Studies show that the Indoor Air Quality in the average home can be up to 100 times more polluted than outdoor air. Modern, almost airtight buildings with low fresh air exchange do not provide sufficient ventilation to remove indoor air contaminants. Americans spend on average 93% of their time indoors, which makes indoor air quality critical to their health. Indoor air pollution is even more critical in their homes, when they spend most of their time—on average 70%. This percentage is even higher for our children.

Spray-N
FRESH™
“Made with Genuine Tea Tree Oil”

**Natural Acting Formula
for Airborne Allergens**

- **Eliminates Odors**
by quickly freshening foul, musty and mildew odors.
- **Improves Air Quality**
in and around the Hearth Chamber and adjacent areas.
- **Alleviates Asthma Suffering**
due to smoke and airborne allergens.

Spray-N-Fresh is made with Tea Tree and other Essential Oils produced from renewable resources. The natural properties found in Tea Tree Oil are believed to be the most powerful known to man.

is the first and only product formulated to actively improve the quality of air we breathe.

Spray-N-Fresh was specifically formulated to improve the indoor air quality of the home. The primary ingredient in Spray-N-Fresh is Tea Tree Oil, which has been used medicinally since the 1700's. It has only been since the 1920's that physician's realized the benefits Tea Tree Oil has to control bacteria, viruses, mold and mildew. The natural antiseptic property found in Spray-N-Fresh is activated instantly when you spray it into the air or on a surface and then it vaporizes, creating a therapeutic atmosphere in the household environment.

"Made with Genuine Tea Tree Oil"

Australian Tea Tree Oil is four to five times stronger than the usual household disinfectants. It is considered the *most powerful natural antiseptic know to man*. But it is 100% natural, biodegradable and environment-friendly. This natural deodorizer does not mask odors, but *breaks down and eliminates musty or organic malodors*.

Australian tea tree oil is volatile and its vapors eliminate germs and molds in the indoor air. It is used as a disinfectant to purify indoor air in homes, offices, cruise ships, and hotels. When used in a hospital room, it does not interfere with other treatment for the patient.

Great for Traveling!

The oil has been successfully used for the "sick building syndrome." When placed inside the air-conditioning system, it protects office workers against the risks of legionella, immunological diseases, fatigue, headaches, colds, watery eyes, chronic coughs, and runny noses, resulting from breathing contaminated air. Similarly, it protects passengers on ships or airliners against sudden epidemics. During the flue season, it can be used to prevent the spread of germs in homes and offices. In addition, the tea tree oil is a natural deodorizer. Its vapors do not mask but break down and eliminate musty or organic malodors.

Mold

Dust Mite

The tea tree oil is penetrating – the oil and its vapors penetrate into porous materials, where they provide a lasting protection. The oil penetrates through the skin and even through fingernails. The vapors saturate the air, spread by diffusion and chase biological pathogens into low-ventilated corners and even into sheetrock, ceilings, upholstery, and carpeting.

There are other Essential Oils that also eliminate bacteria, but Australian Tea Tree Oil is unique—it also eliminates fungi, including molds and mildew. It has a broad-spectrum antibacterial, antiviral, and antifungal activity. It eliminates all three categories of infectious organisms:

- Bacteria
- Viruses
- Fungi, Molds & Mildew

Isn't your family worth protecting.

Available in 6 Fresh Scents

- Cool Water
- Eucalyptus
- Lemon
- Mint
- Natural
- Spicy Orange

Common Uses:

- Smoke Odor
- Mold & Musty Odors
- HVAC Registers
- Car Interiors/Venting
- Airplane/Bus Travel
- Hotel Rooms
- Childs Play Area
- Bedrooms
- Mattress
- Pillows
- Bedding
- Closets
- Furniture
- Carpets
- Bathroom
- Living Room
- Locker Room
- Gym Bags
- Sports Equipment
- Office
- Pet Areas
- Toy Box
